PHOTOBIOMODULATION

COMFORT & HEALING AFTER TREATMENT

CANNON SMILES
LASER & ESTHETIC DENTISTRY

What is Photobiomodulation (PBM)?

PBM, also known as low-level laser therapy, uses the Neodymium (in our office) wavelegth of light to stimulate your body's natural healing response. The treatment is gentle, painless, and does not generate heat or damage tissue.

Potential Benefits

- May help reduce post-operative discomfort
- May decrease swelling and inflammation
- Supports healthy tissue healing
- May improve comfort during recovery
- Non-invasive and medication free

What to Expect

- Treatment takes 1 minute per site
- No anesthesia is needed
- You can return to normal activies immediately after the treatment

When to schedule?

Please contact the office prior to the day of your appointment so we can get you into our schedule.
Treatment is most beneficial when performed within the first 24-48 hours after treatment but you still can see improvement after.
Treatment can be done again if additional treatments needed after 48 hours.

Fee: $75 per visit

This does not replace the post-op instructions provideed by other providers. Continue taking prescribed medications and follow all home care instructions.
